

AI Applications Portfolio

Thomas Jaymon

- **AI & Robotics Student**

- I am interested in applying artificial intelligence, robotics, and intelligent automation to solve real-world problems.

Areas of Interest

- Artificial Intelligence
- Robotics
- Machine Learning
- Responsible AI
- Financial Technology
- Intelligent Automation

THE FUTURE
IS INTELLIGENT

AI | ROBOTICS | INNOVATION

Building intelligent solutions
for a better tomorrow.

Course Highlights: AI in Blockchain & Government

AI in Blockchain

- Fraud detection
- Supply-chain management
- Intellectual-property management
- AI and blockchain integration

AI in Government

- Fraud detection
- Public-health analytics
- Smart cities
- Citizen services

What I Learned

- AI can improve efficiency and decision-making, but privacy, fairness, transparency, and human oversight are essential.

SMART MANUFACTURING

FINANCE + AI

AI in Manufacturing

- Predictive maintenance
- IIoT
- Digital twins
- Computer vision
- Waste and energy optimization

AGI in Finance

- Fraud detection
- Financial planning
- Risk management
- Regulatory compliance
- Financial inclusion

What I Learned

- AI can solve specialized problems today, while AGI could potentially provide broader reasoning and adaptability across complex financial systems.

Course Highlights: Manufacturing & AGI in Finance

SLIDE 4 AI APPLICATIONS ACROSS INDUSTRIES

Industry

AI Applications

- | | |
|-----------------|---|
| • Finance | Fraud detection, risk analysis |
| • Manufacturing | Predictive maintenance, quality control |
| • Government | Smart cities, public services |
| • Healthcare | Data analysis, decision support |
| • Blockchain | Fraud prevention, secure records |

Real-World Applications of AI

- **Career Goal:** Develop responsible AI solutions that improve efficiency, security, and decision-making.
